Reciprocating Saws

The New Generation Gear Head
ANC = All-round Needle-bearing Crank Drive

CS Unitec’s reciprocating saws cut faster and last longer than other saws in their class. The ANC gear drive and heavy-duty air or electric motor provide the best power-to-weight ratio in the industry.

ANC Gear Drive: Low Friction • High Torque

The new, unique design of the ANC gear:

- reduces friction and wear, resulting in less heat and longer service life.
- resists dust and water, making the gear head maintenance free.
- allows for aggressive high-torque cutting, providing good chip flow and long blade life.

Reciprocating Saw Blades

Standard Blades
All CS Unitec reciprocating saws can use the widely available standard reciprocating blades with the 1/2” universal tang.

Heavy-duty Blades
These blades are much thicker than standard blades and have a stronger double-tang mount for heavy-duty cutting, either free-hand or with a clamp.

M-Tooth Blades
Unique tooth geometry allows these blades to cut in both directions – twice as fast!

Extremely versatile, CS Unitec’s reciprocating saws use the universal 1/2” tang or special double-tang saw blades (see page 13). Our extra-thick saw blades resist bending and cut pipe at right angles with a pipe clamp.

In addition, CS Unitec’s Mega Sharp M-Tooth saw blades (see page 13) have a unique, patented tooth geometry that allows these blades to cut quickly with each stroke, forward and back, saving time and money.

M42 Cobalt Steel SuperBand™ Saw Blades

CS Unitec’s SuperBand™ saw blades are made of tough M42 steel. 8% cobalt gives our blades the highest heat resistance and wear resistance of all portable band saw blades. The hardness is Rc 67-69.

SuperBand™ saw blades easily cut most ferrous and nonferrous metals, including steel, stainless steel, Inconel, chrome, Hastelloy, tool steels, “super” alloys and other materials. Longer life, fewer blade changes and the fastest cutting rates result in SuperBand™ providing the lowest cost per cut.

Maximize Diamond Chain life with these hints

Estimated chain life for AirFORCE Premium – 29 segment chain (Part No. CC 01-3810) is approximately 600 in.-ft. in concrete with up to $\frac{5}{8}$" rebar.

Factors negatively affecting chain life:

- Steel reinforcing… many pieces of large diameter rebar cause reduced life
- Aggregate hardness… harder aggregates cause reduced life
- Operator experience… first-time users generally get less chain life

Cutting tips to improve chain life:

- Use minimum of 20 PSI water pressure
- Always cut at full throttle – slowly plunge into wall and push hard enough to cause the RPMs to drop by 25% to 30%
- Always apply steady feed force
- Slowly rock the bar and chain into the cut using Wallwalker® as a pry point
- Reduce arm motions – hold saw close to body, using legs and body to apply feed force; always cut with saw between shoulders and knees, preferably at waist height
- If saw begins to drift off the intended cut line, pull out and restart cut

Estim ated chain life for AirFORCE Premium – 29 segment chain (Part No. CC 01-3810) is approximately 600 in.-ft. in concrete with up to $\frac{5}{8}$" rebar.

</tbody>
</table>

The cutting life of the chains is not guaranteed. There are many variables from job to job, including hardness of concrete, which make it impossible to accurately predict chain life.

*These numbers are rough, starting point estimates only, not for bidding purposes. Please refer to Operator's Manual for proper safety precautions.

How to calculate inch-foot (in.-ft.)

An inch-foot (in.-ft.) is equal to the Depth of Cut in inches x Length of Cut in feet. This measurement is used to determine chain or blade life.

For example:

Calculate how many in.-ft. are in this doorway.

1. Determine the Depth of Cut in inches. For this example, it is 8 inches.
2. Determine the Length of Cut in feet. $3 + 7 + 3 + 7 = 20$ feet.
3. Multiply the two numbers. $8 \text{ in.} \times 20 \text{ ft.} = 160 \text{ in.-ft.}$

Note for metric users: $1\text{cm} = .3937 \text{ inches}$ and $1 \text{ meter} = 3.2808 \text{ ft.}$

Air Pac Extends life of pneumatic power tools

How it Works:
- Air compressors compress air into small areas – this causes heat, which contains moisture
- As heated air travels through air lines, it cools, creating water droplets
- When this air/water mixture enters the AirPac, it travels through a baffle that traps the water and dirt and drops it into a holding area
- When enough water is accumulated, a float allows the water and dirt to be automatically ejected
- Dry air then enters the lubricator and is mixed with oil and sent to the tool

Air Tool Lubricant – Non-toxic

CS Unitec offers three types:

ProLube-ATL: A super-premium synthetic air tool lubricant. Provides maximum lubrication, cleaning and protection for portable air tools.

ProLube-ATL/AF (anti-freeze): ProLube-ATL/AF blend that prevents freezing and is ideal for operating air tools in cold climate conditions.

Air Tool Line Conditioner: For use in underwater air tools. Displaces moisture. Developed to inhibit rust and corrosion of air motors.
