

MEGA HIPPO Mixing Station Frame Modification

Debris buildup on the motor mount column and the mounting tube was reported, restricting adjustment of the mixing motor and paddle (shown at left).

To prevent this, modifications to the HIPPO frame and motor have been made. Updated models were released in September, 2020. To assist in obtaining the correct replacement parts for your HIPPO, please see below. All other replacement parts remain the same.

Larger square profile motor mount (p/n PH606) with splash protection shroud

Updated HIPPO Frame (p/n PH125) with angled bracing strap to prevent interference with splash protection shroud and larger square profile spine.

What HIPPO Frame/Mount Do I Have?

HIPPO Models produced UNTIL September 2020 have a straight bracing strap.

PH603 Motor Mount
(without shroud, shown at right)

PH120 Frame Module
(framework only)

HIPPO Models produced AFTER September 2020 have an angled bracing strap.

PH606 Motor Mount
(larger OD with shroud, shown at right)

PH125 Frame Module
(framework only)
