Non-Sparking Safety Tools
Aluminum Bronze (AlBr) or
Copper Beryllium (CuBe₂)

Advanced forging technology ensures the high quality and refined appearance of all our products. The liquid forging technology procedures are as follows:

CS Unitec Non-sparking, Non-magnetic Safety Tools *Aluminum Bronze (AlBr) and Copper Beryllium (CuBe₂)*

CS Unitec's Non-sparking, Non-magnetic Hand Tools are manufactured from special Aluminum-Bronze or Copper-Beryllium alloys for safe use in Ex zones where hazardous, flammable or combustible vapors, liquids, dusts or residues may be present.

Our line of safety tools consists of hammers, flange wedges, striking wrenches, impact sockets, screwdrivers, shovels and other hand tools. They comply with ATEX Directives for Ex Zones 0, 1 and 2 (Flammable Gas, Mists or Vapors); Zones 20, 21 and 22 (Combustible Dusts); and M1 and M2 for mining.

Aluminum Bronze and Copper Beryllium Non-sparking Safety Tools from CS Unitec are specifically designed to eliminate the risk of sparks at sites where explosive atmospheres may be present.

Appropriate applications include oil drilling platforms, petrochemical plants, oil refineries, natural gas installations, ammunition plants, varnish factories, sugar refineries, grain silos, mining and other industries where non-sparking safety tools are required. The non-magnetic feature of these alloys also makes them ideal for working on special machinery with powerful magnets such as MRI machines, military de-mining and explosives.

CS Unitec's safety tools are drop forged for the highest quality in hand tools. These corrosion-resistant tools are suitable for use in shipyards, laboratories, and paper and pulp mills, as well as in the pharmaceutical, food product manufacturing and wine industries.

We also offer ATEX Classified air and hydraulic power tools and other equipment for use in Ex zones. See pages 82-92 for more information.

ATEX 94/9/EC • DNV

CS Unitec's Aluminum Bronze (AlBr) and Copper Beryllium (CuBe₂) tools are also BAM certified.

BAM certifies that the materials used in CS Unitec's Non-sparking tools have met the requirements for and are appropriate for use in potentially explosive atmospheres of zones 0, 1, 2 and/or 20, 21, 22 according to Directive 1999/92/EC of all explosion groups according to IEC 60079-20-1:2010. See page 93 for more information.

For Use in Ex Zones and Hazardous Environments

CS Unitec offers a complete line of High-quality Non-sparking, Non-magnetic and Non-corrosive Safety Tools. CS Unitec is a leader in special Copper Alloy Safety Hand Tools manufactured for use in any high-risk area where a spark can create a disaster.

CS Unitec Non-sparking Safety Tools are recommended for use where hazardous, flammable or combustible vapors, liquids, dusts or residues are present and should be used by all industrial safety programs. CS Unitec Non-sparking Safety Tools are an inexpensive investment for your company.

CS Unitec Non-magnetic Safety Tools are tested according to NATO specification STANAG 2897 Annex C, where the magnetic value is measured in Nano Teslar. This enables our Tools to be used around sensitive magnetic equipment, including scanners, de-mining, disarming, etc. Our Tools are NATO stock numbered.

CS Unitec Corrosion-resistant Safety Tools are the ideal choice when working in marine and offshore environments. Corrosion and rust can be extremely dangerous in hazardous environments. Impacts involving rust can initiate a thermal reaction which can cause an ignition in an explosive atmosphere.

It is important that the user of CS Unitec Safety Tools keeps the Tools in clean working order. Like other personal protection equipment, it is each user's duty to inspect the Tools before use.

We offer over 3000 individual Tools made from Special Solid Copper-based Alloys. We manufacture and supply our Safety Tools in two different alloys: Copper-Beryllium Alloy (CuBe₂) and a Special Aluminum-Bronze Alloy (AlBr).

International Regulations for Work in Ex or ATEX zones demand the right equipment. CS Unitec Copper-Beryllium Tools (CuBe₂) fulfill the demand in the ATEX Directive 94/9/EC for work in Zones 0, 1 and 2 (Gas, Mists or Vapors); Zones 20, 21 and 22 (Dusts); and M1 and M2 for mining.

CS Unitec Aluminum-Bronze Tools (AlBr) fulfill the demand in the ATEX Directive 94/9/EC for work in Zones 1 and 2 (Gas, Mists or Vapors), plus Zones 21 and 22 (Dusts).

CS Unitec's Copper-Beryllium Tools (CuBe₂) and Aluminum-Bronze Tools (AlBr) are BAM certified. BAM certifies that the materials

used in CS Unitec's Non-sparking tools have met the requirements for and are appropriate for use in potentially explosive atmospheres of zones 0, 1, 2 and/or 20, 21, 22 according to ATEX Directive 1999/92/EC (ATEX 137) of all explosion groups according to IEC 60079-20-1:2010.

Gas, Mists or Vapors

- Zone 0 - An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is present frequently, continuously or for long periods.
- Zone 1 - An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is likely to occur in normal operation occasionally.
- Zone 2 - An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is not likely to occur in normal operation but, if it does occur, will persist for only a short period.

Dusts

- Zone 20 - An atmosphere where a cloud of combustible dust in the air is present frequently, continuously or for long periods.
- Zone 21 - An atmosphere where a cloud of combustible dust in the air is likely to occur in normal operation occasionally.
- Zone 22 - An atmosphere where a cloud of combustible dust in the air is not likely to occur in normal operation but, if it does occur, will persist for only a short period.

Quality control, testing and customer service are priorities.

The manufacture of our safety tools is ISO9001:2000 certified, and our Tools are recommended and certified by several international organizations such as BVQI, DNV and Force Technologies.

Our Safety Tools are continuously spark-proof tested according to strict test procedure (CST Test).

Because of the heat treatment processes, our Copper-Beryllium Tools (CuBe₂) have a Rockwell C hardness of 38 HRC. CS Unitec Aluminum-Bronze Tools have a Rockwell C Hardness of 27 HRC.

All CS Unitec Safety Tools have a lifetime warranty against breakage or performance failure under normal use.

All Box/Ring Ended CS Unitec Safety Tools are manufactured with a Round Corner.

CS Unitec's Round Corner design prevents damage to the bolt head and provides very high tensile strength.

All our pliers and screwdrivers have an ergonomic, two-component handle. A unique handle grip design prevents slipping.

Drop-forged construction ensures high strength and long life. Tools are designed according to DIN Standards.

If you don't see it, ask. CS Unitec offers custom designs upon request.

There is a CS Unitec Safety Tool Kit for any job:

- Socket Sets
- Wall-mounted CS Unitec Tool Kit
- Custom-designed Tool Kit

CAUTION:

Safety standards for grinding Copper-Beryllium Alloys, or for other operations that may generate dust, are established by OSHA and recorded in the Code of Federal Regulations 29 CFR 1910.134 and 1910.1000.

Safety Tools must only be ground or reshaped by companies approved for grinding such material, according to OSHA regulations.

MSDS (Safety Data Sheet) / Bulletin can be provided upon request or can be downloaded from our web site: www.csunitec.com

For ATEX information, visit: http://ec.europa.eu/growth/sectors/mechanical-engineering/atex/index_en.htm

Safety Tools should not be used in contact with acetylene. Acetylene may react with copper to form explosive acetylides. Tools containing less than fifty percent copper may be used in an acetylene environment. Visit www.csunitec.com for safety information.

CS Unitec Copper-Beryllium Tools (CuBe) build the demand in the ATEX directive for work in Zones 0, 1 and 2 (Gas, Vapors or Mists), Zones 20, 21 and 22 (Dusts), and M1 and M2 for mining.

CS Unitec Aluminum Bronze Tools (AlBr) fulfill the demand in the ATEX directive for work in Zones 1 and 2 (Gas, Vapors or Mists), plus Zones 21 and 22 (Dusts).

Zone Definitions

Gas, Vapors or Mists

- Zone 0:** An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is continuously or frequently present in 1% by volume.
- Zone 1:** An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is likely to occur in normal operation.
- Zone 2:** An atmosphere where a mixture of air and flammable substances in the form of gas, vapor or mist is not likely to occur in normal operation, but if it does occur will persist for only a short period.

Dusts

- Zone 20:** An atmosphere where a dust of combustible dust is in an amount hazardous, continuously or frequently present.
- Zone 21:** An atmosphere where a dust of combustible dust is not likely to occur in normal operation.
- Zone 22:** An atmosphere where a dust of combustible dust is not likely to occur in normal operation, but if it does occur will persist for only a short period.

How to Choose the Correct Alloy for Your Application

ATEX Classified Power Tools Ensure a High Level of Safety in Explosive Atmospheres

Working in explosive atmospheres carries many challenges, the most important of which is the safety of the workers. An explosive atmosphere is defined as one in which enough flammable gas, mist, vapor or dust is mixed with air to cause an explosion if ignition occurs. The source of ignition could be either electrical or mechanical in origin. The requirements for controlling explosive atmospheres, as well as the standards for equipment and protective systems used in them, are outlined in the ATEX Directive 94/9/EC (ATEX Group-95).

ATEX (ATmospheres EXplosibles) is a directive outlining a number of technical and quality objectives that must be complied with to the satisfaction of a third party certification association. This directive is addressed to those who design, manufacture or sell any equipment intended for use in potentially explosive atmospheres. Once the objectives have been met, the approved product is marked with the appropriate ATEX classification label and Ex symbol (Ex). [For ATEX information, visit: http://ec.europa.eu/growth/sectors/mechanical-engineering/atex/index_en.htm]

Compliance with the ATEX directive has been a legal requirement in all European Union States since July 2003. The ATEX symbol is recognized internationally, providing safety assurances to users in EU states, as well as assuring users in the U.S. and other non-EU countries that the product was manufactured to high levels of safety.

CS Unitec, Inc., a company specializing in pneumatic, hydraulic and electric power tools for construction and industry, offers a comprehensive line of power tools ideal for the oil, gas and energy industries. ATEX classified pneumatic and hydraulic power tools from the company's line include selected models of reciprocating saws, hacksaws, rotary hammer drills, impact wrenches, portable band saws, nut runners, magnetic drills and more.

Four ATEX classification elements are used to ensure that a specific piece of equipment is appropriate for its intended purpose and can be safely used in a particular application. These four elements are: 1. Industrial or Mining Application; 2. Equipment Category; 3. Atmosphere; and 4. Temperature (see chart below).

	Group	Equipment Category	Atmosphere	Safety Design	Temperature (surface does not exceed)
ATEX 94/9/EC	II Surface Industry	1 Very High Level of Protection [Zone 0, 1, 2 or 20, 21, 22]	G Atmosphere Containing Gas, Vapors or Mist	c (previously known as "machine norms")	T1 842°F/450°C
					T2 572°F/300°C
					T3 392°F/200°C
	IM Mining Applications	2 High Level of Protection [Zone 1, 2 or 21, 22]	D Atmosphere Containing Dust		T4 275°F/135°C
					T5 212°F/100°C
					T6 185°F/85°C
	3 Normal Level of Protection [Zone 2 or 22]				

For example, CS Unitec's Pneumatic Reciprocating Saw, model number 5 1217 0020, is classified for Ex II 2 GcT5, making it appropriate for industrial Ex zones 1, 2 and 21, 22.

CAUTION: The user is responsible for following all safety regulations (OSHA, etc.) when choosing the appropriate tool for the hazards present.

REDUCED SPARKING GRINDING AND CUTTING DISCS

Designed for grinding and cutting steel, stainless steel, titanium, fiberglass and other materials in oil, gas, nuclear and industries where spark reduction and long life are important

Eco Brazing (EB) diamond grinding discs from CS Unitec can reduce sparking to approximately 1% of that produced by ordinary resinoid wheels, making EB diamond discs a better choice than resin bonded wheels for use in some hazardous environments.

- Last 100x longer than ordinary resin bonded wheels – less material waste
- Reduced sparking increases the visibility of the workpiece
- Not ATEX approved – **sparks will occur during grinding** (see note below)
- Diamond grit protrudes higher off the EB diamond disc than traditional diamond wheels, providing greater durability and 100x longer service life
- The EB diamond discs substantially reduce the amount of abrasive dust emitted
- High-yield steel backing plate is elastic, helping to ensure that operators do not grind the material by over-removal
- Ideal for grinding steel, stainless steel, titanium, fiberglass and other materials

CS Unitec Non-Sparking Tools Certifications

CS UNITEC SAFETY TOOLS are covered by a certification delivered by the **BAM Berlin, Germany**.

What does **BAM** stand for?

*The **BAM** is the federal institute for material and research based in Berlin, Germany. **BAM** issues testing programs, achieves tests and certifies materials according to specific protocols.*

Why choose the **BAM** for non-sparking tools?

***BAM** is a government agency created in 1954 and is the most known and trusted laboratory in Europe to achieve tests on materials' safety.*

How is a spark created?

A spark is an incandescent particle of metal generated when detached from the main part of metal. The energy produced by this particle depends on the hardness of the material. Steel creates incandescent sparks when softer materials do not.

*The materials used by **CS UNITEC SAFETY TOOLS** to manufacture the tools must combine enough strength for working in difficult conditions while keeping its non-sparking property.*

How does **BAM** relate to **CS UNITEC SAFETY TOOLS**?

*Materials used to manufacture **CS UNITEC SAFETY TOOLS** have been tested and approved by the **BAM** to be non-sparking. Therefore, the tools made from the tested materials help fulfill the requirements indicated by the European **ATEX** directive 1999/92/EC.*

For more information on **BAM and Non-sparking tools certifications, visit:**
www.csunitec.com/nonsparking

 **BAM** Type Approved

Certification No. **BAM/ZBF/004/14**

The **BAM** certificate relates only to the properties of the material pairings
